## DETAILED ACTION

### *Election/Restrictions*

Applicant's election without traverse of claims 1-5 in Paper No. 5 is acknowledged.

### *Claim Rejections - 35 USC § 112*

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim 5 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Regarding claim 5, applicant should clarify the arrangement of the adhesive tape relative to the core structure.

### *Claim Rejections - 35 USC § 103*

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-4 are rejected under 35 U.S.C. 103(a) as being unpatentable over Brown [US 3,675,176] in view of De Graaf [US 6,492,893].

Brown discloses an inductor device [figure 1-2] comprising:

Art Unit: 2832

- a toroidal magnetic core [5]; and
- a plurality of bi-filar center tapped windings [14] wound about the magnetic core.

Brown discloses the instant claimed invention except for the specific structure of the magnetic core.

De Graaf discloses a toroidal magnetic core structure [11] having a gap [12] and an insulating layer [15].

It would have been obvious to one having ordinary skill in the art at the time the invention was made to use the core structure of De Graaf for the toroidal magnetic core of Brown for the purpose of providing insulation and controlling the magnetic field.

Regarding claim 3, PVC is a well know insulating material.

Claim 5, as best understood in view of the rejection under 35 U.S.C. 112 second paragraph, is rejected under 35 U.S.C. 103(a) as being unpatentable over Brown in view of De Graaf as applied to claims 1-4 above, and further in view of Sylvester, Jr. et al. [Re 33,345].

Brown in view of De Graaf discloses the instant claimed invention except for an adhesive tape wrapped around the core/coil structure.

Sylvester, Jr. et al. discloses a toroidal core coil structure [figure 11] including insulating tape [65, 68] wrapped around the core/coil structure.

It would have been obvious to one having ordinary skill in the art at the time the invention was made to wrap insulating tape around the core/coil structure of Brown, as modified, as suggested by Sylvester, Jr. et al., for the purpose of protecting the core/coil structure.

Art Unit: 2832

It would have been obvious to one having ordinary skill in the art at the time the invention was made to use adhesive tape for the tape of Sylvester, Jr. et al., for the purpose of facilitating manufacturing.
